Things Darius Leskauskas fucked up

VilniusPHP 0x29

2016-04-07

Start Deploy & Go Home

And then…

Lesson #1

Be patient!

Removing files from S3

Removing files from S3

files/clienta = files/clientabc

Backups are working... Except this bucket.

Check backups, before removing anything.

IP change

Something doesn't look right here

Bug arrives

And it comes...

Create and maintain infrastructure change scenarios

DEV/PROD DB's with same name

Lesson #4

Name DEV DB's with
some prefix

Or wait for a software update… :)

Unpushed commits can disappear

What if you delete .git directory?

No matter what, every branch should be on the server

We have to release update today

You're doing other tasks...

You feel the power of shitstorm in the morning

Create reminders for important tasks
