Deployment'o bėdos

- Kodo perrašymas
- Senų klaidų sugrįžimas
- Naujos klaidos
- Sugaištas laikas

Dideli įrankiai dideliems serveriams (Jei prieiame prie komandinės eilutės)

https://github.com/BrunoDeBarros/ git-deploy-php (pure PHP / FTP)
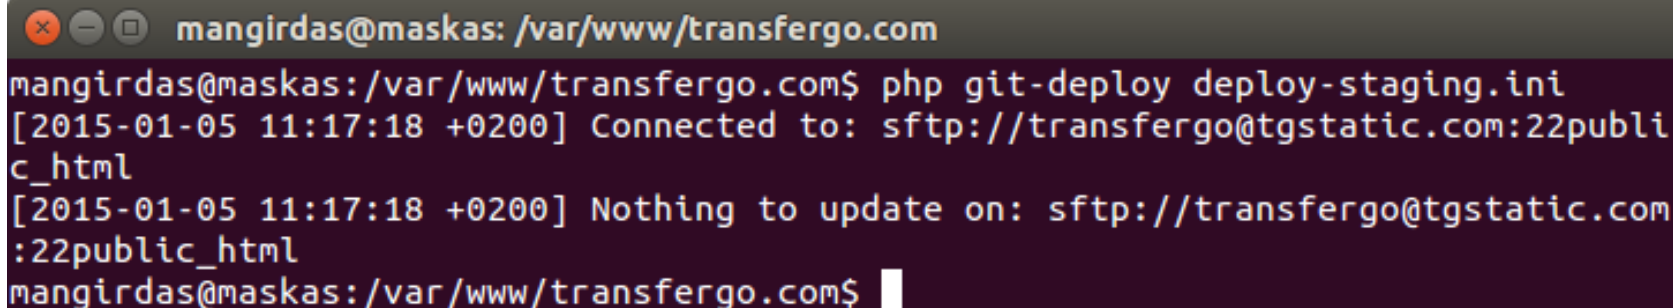

Sukuriame deploy.ini failą

```ini
1   ; This is a sample deploy.ini file.
2
3   [example]
4
5   skip = false
6   user = example
7   ; remove this options and enter a password in the terminal
8   pass = password
9   host = example.com
10  port = 21
11  path = /path/to/installation
12  passive = true
13
14  ; If that seemed too long for you, you can specify servers like this:
15  [ftp://example:password@example.com:21/path/to/installation]
```
